Education	
University of Wisconsin–Madison B.S. Computer Sciences	Aug. 2021 – Dec. 2024
Experience	
Capital One Software Engineer II - Full-stack engineer (React/React Native + NestJS) across an upcoming Capital One product and the live Velocity Black platform. - Building a high-scale payment processing system supporting 5M+ users and handling hundreds of thousands of daily transactions using AWS Lambda and SQS. - Own memberships lifecycle - built auto-renewal jobs with member notifications, partnering with agents on production issues. - Designed and shipped rewards earn/burn end-to-end as a launch feature.	Chicago, IL May. 2026 – Present
Software Engineer I - Maintain and extend the platform’s universal checkout flow, integrating instant purchase into instant-book dining and flights. - Automated virtual card provisioning and membership billing, cutting manual ops by ~200 hours/month.	Feb. 2025 – May. 2026
Capital One Software Engineer Intern - Implemented role-based access controls (RBAC) on MLaaS platform, improving security posture and compliance audits. - Built parameter-sharing framework across ML workflows, cutting redundancies and reducing model deployment errors.	Plano, TX Jun. 2024 – Aug. 2024
Enterprise Rent-A-Car Software Engineer Intern - Built ETL pipelines for analytics using Airflow; NestJS API to integrate Google Looker Studio in Angular app. - Improved ML model precision by 6% using a shallow neural network model for model aggregation in PyTorch.	Madison, WI May. 2023 – Aug. 2023
Wisconsin Institute for Discovery Undergraduate Researcher Published "Distributed statistical inference in social interaction networks" on human opinion dynamics vs. AI agents.	Madison, WI Dec. 2023 – Sep. 2024
Projects	
Cryptify Rust - Created and maintain open source library with 400,000+ downloads used to obfuscate Rust programs at runtime and at rest. - Includes features to obfuscate source code directly with variable renaming and direct flow obstruction.	Jan. 2024
Swapper Go, React, TypeScript, RavenDB 1st place at RavenDB hackathon (out of 2000 participants) for virtual trading application. - Developed full stack with features: spatial search, fuzzy search, user profiles, interactive messaging, and item/profile ratings.	Feb. 2024
Distributed File Transfer Python Designed UDP-based file transfer protocol with custom packet format, addressing scheme, and packet reassembly.	Sep. 2024
PranavBot Node.js, AWS Lambda, API Gateway, ECR, CloudFront, Astro Built a RAG chatbot answering questions about me, using LangChain and vector embeddings to retrieve relevant context.	Sep. 2023
Leadership & Achievements	
AWS Certified Solutions Architect - Associate Undergraduate Projects Lab Coordinator MadHacks Organizer 3x organizer of the largest hackathon at UW-Madison (650+ applicants, 300+ attendees, \$15,000+ in funding)	Aug. 2025 Dec. 2022 – Dec. 2024 Feb. 2023 – Dec. 2024
GitHub Campus Expert Led instructional workshops and represented GitHub within CS department of 3,000 students.	Dec. 2023 – Dec. 2024
Skills	
TypeScript, Python, JavaScript, Rust, Go, Java, C, C++, SQL, AWS, Kafka, React, React Native, Astro, Angular, Node.js, NestJS, Express, HTML/CSS
